

You can access data by this link:

<http://giws.usask.ca/KistersWeb/main.php>

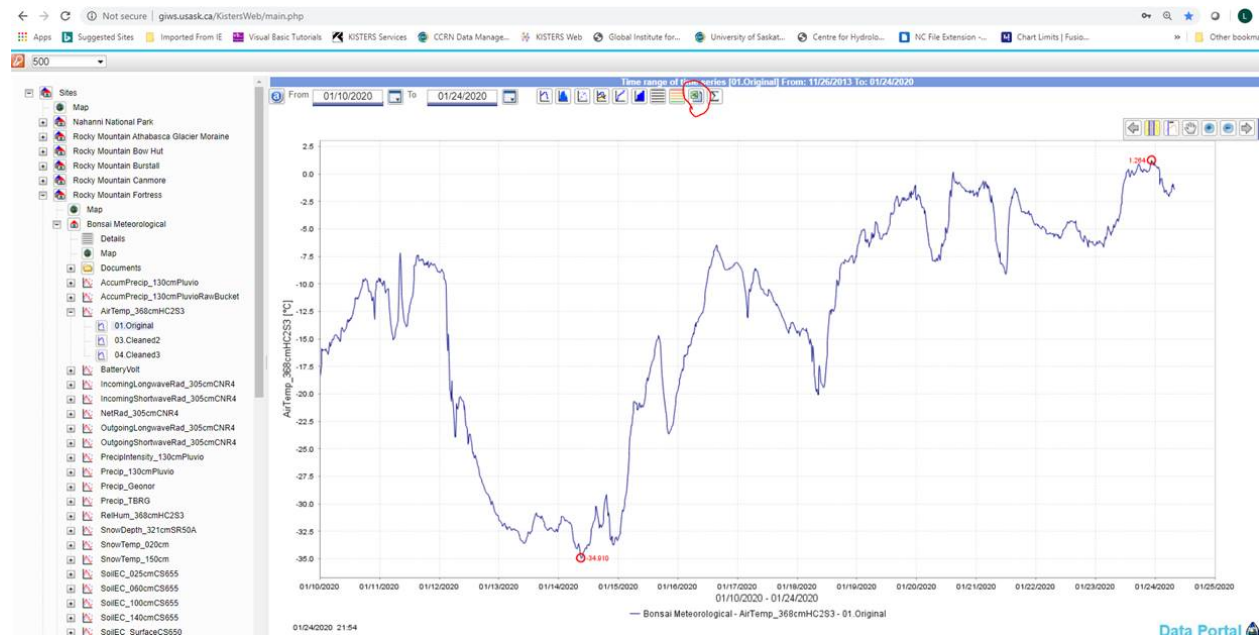

user= public

pass= public

(Or other granted user/pass)

Chose the desired site name from Sites at the left menu bar. By clicking that you will see the stations name inside that site.

Clicking on stations brings you to all parameters of that and each parameter has several levels of data (depend on what the data owner released). 01.Original is the raw data, 03. Cleaned2 is the data cleaned from outliers by WISKI database, 05. Filled is the filled data by WISKI, and 04.Cleaned3 data is the data populated from WISKI cleaned and filled plus data that has been cleaned and filled from outside of machine by researchers, so it is the most cleaned and filled data that we have. Clicking on each level of data you can see the graph of data. You can play with the tool buttons at the top of the graph and learn about data. (You can see in the below picture what you should expect after all steps.)

The button that I circled by red in the picture help you to download csv format of data after you set the preferred data on the calendar.

Please email laleh.moradi@usask.ca if you have any question or issue to access data.
