

Field	Response
1. Contact Information Name	Tricia Stadnyk
1. Contact Information Department	Civil Engineering
1. Contact Information Email	tricia.stadnyk@umanitoba.ca
1. Contact Information University	University of Manitoba
1. Contact Information Personal Web Page	http://umanitoba.ca/faculties/engineering/departments/civil/research/water/index.html
1. Contact Information Phone	204-474-8704
2. Please indicate the alignment of your research expertise to one or more of the following GWF objectives/deliverables:	Predict water futures – use Big Data to make informed decisions, better models to assess change in human/natural land and water systems

Field	Response
<p>3.1 Please indicate the alignment of your research expertise to the GWF Science Pillar 1 – Diagnosing and Predicting Change in Cold Regions:</p>	<p>Hydrometeorology and Climate Change – improve understanding and prediction of how climate change influences water availability and extreme events Hydrology and Terrestrial Ecosystems – improve understanding and prediction of hydrological and terrestrial processes and watershed hydrology and how processes and systems will evolve and interact under a changing climate</p>
<p>3.2 Please indicate the alignment of your research expertise to the GWF Science Pillar 2 – Developing Big Data and Decision Support Systems:</p>	<p>Decision Support Systems – predictive and diagnostic modelling system development and deployment for hydrology, water quality and water resources</p>
<p>3.3 Please indicate the alignment of your research expertise to the GWF Science Pillar 3 – Designing User Solutions:</p>	<p>Energy & Natural Resources – including mining and hydroelectricity Other Industry – Including Insurance, Finance, Measurement and Engineering sectors</p>

Field	Response
4. Please indicate the alignment of your research expertise to one or more of the following user needs:	<p>Model development to support climate change impact assessment, including regional climate change modeling, hydrological and ecological modeling, specifically involving improvements in forecasting and predictive capacity, downscaling, and scenario development of water futures.</p> <p>Complex system modeling and analyses reflect the growing awareness of interacting dynamics in human–natural coupled systems. These studies emphasize the inter–relationships between water resources and transportation systems, infrastructure, energy generation, mining, food production, and source water protection.</p>
5. Please list regions of Canada and the biomes (e.g. mountains, boreal forest, Great Lakes–St Lawrence), watersheds, and/or river basins where you are interested in conducting research for GWF:	<p>Hudson Bay Basin including the Nelson and Churchill River basins, Mackenzie River basin, Boreal forest region of Canada</p>

Field	Response
6. Please list any other expertise or recent experience (subjects, river basins, technology) not covered by above query that could help us in assessing your alignment with the GWF programme:	isotope hydrology and coupled isotope–hydrological modelling (to inform model parameterization), specific modelling expertise in the Mackenzie (with Alberta Innotech) and Nelson–Churchill River basins (with Manitoba Hydro), and continental–scale hydrologic modelling of the Hudson Bay watershed (BaySys project).
