1. Contact Information   Name	Jason Venkiteswaran
1. Contact Information   Department	Department of Geography and Environmental Studies
1. Contact Information   Email	<a href="mailto:jvenkiteswaran@wlu.ca">jvenkiteswaran@wlu.ca</a>
1. Contact Information   University	Wilfrid Laurier University
1. Contact Information   Personal Web Page	<a href="https://wlu.ca/faculty-profiles/arts/jason-venkiteswaran.html">https://wlu.ca/faculty-profiles/arts/jason-venkiteswaran.html</a>
1. Contact Information   Phone	+1 519-884-0710 x4968
2. Please indicate the alignment of your research expertise to one or more of the following GWF objectives/ deliverables:	<p>Improve disaster warning – develop scientific knowledge, monitoring and modelling technologies, and national forecasting capacity to predict the risk and severity of extreme events</p> <p>Predict water futures – use Big Data to make informed decisions, better models to assess change in human/natural land and water systems</p> <p>Inform adaptation to change and risk management – propose governance mechanisms, management strategies, and policy tools to reduce the risk of water threats, design adaptive strategies, and enhance economic opportunities</p>
3.1 Please indicate the alignment of your research expertise to the GWF Science Pillar 1 – Diagnosing and Predicting Change in Cold Regions:	<p>Hydrology and Terrestrial Ecosystems – improve understanding and prediction of hydrological and terrestrial processes and watershed hydrology and how processes and systems will evolve and interact under a changing climate</p> <p>Water Quality and Aquatic Ecosystems – improve understanding and prediction of how climate changes in climate, hydrology, and land use impact water quality and the health of aquatic ecosystems</p> <p>Water and Health – determine how changes to climate, extreme events, hydrology and water quality will affect human health in urban, rural and Indigenous communities</p>

Field	Response
3.2 Please indicate the alignment of your research expertise to the GWF Science Pillar 2 – Developing Big Data and Decision Support Systems:	Big Data for Water – sensors, sensing, instrumented river basins, data analysis systems Decision Support Systems – predictive and diagnostic modelling system development and deployment for hydrology, water quality and water resources
3.3 Please indicate the alignment of your research expertise to the GWF Science Pillar 3 – Designing User Solutions:	Water Environment – ecosystem health and conservation, water management Agriculture – including farming, food processing, country foods Energy & Natural Resources – including mining and hydroelectricity Urban and Rural Communities Indigenous Communities

## Field

## Response

4. Please indicate the alignment of your research expertise to one or more of the following user needs:

Projects to improve environmental monitoring, including sensors, drones, satellites, river basin observatories, lake buoys, software development, chemical fingerprinting, real-time monitoring, citizen science, and integration of Big Data platforms for Cold Region water science.

Model development to support climate change impact assessment, including regional climate change modeling, hydrological and ecological modeling, specifically involving improvements in forecasting and predictive capacity, downscaling, and scenario development of water futures.

Risk reduction and analysis tools, including forecasts of floods, droughts, wildfires, and freezing rain (and other weather and climate extremes); water quality assessments; disease risk analyses; and integrated assessments. These tools alert industry and government to potential problems and allow cost/benefit analyses for potential risk mitigation.

Complex system modeling and analyses reflect the growing awareness of interacting dynamics in human-natural coupled systems. These studies emphasize the inter-relationships between water resources and transportation systems, infrastructure, energy generation, mining, food production, and source water protection.

Field	Response
<p>5. Please list regions of Canada and the biomes (e.g. mountains, boreal forest, Great Lakes–St Lawrence), watersheds, and/or river basins where you are interested in conducting research for GWF:</p>	<p>Using the nomenclature of Olson et al. 2001. Terrestrial ecoregions of the world: a new map of life on Earth. Bioscience 51(11):933–938.</p> <p>Boreal Forest / Taiga Temperate Broadleaf &amp; Mixed Forests Temperate Conifer Forests Temperate Grasslands, Savannas &amp; Shrublands Tundra</p> <p>Using site specific names:</p> <p>Grand River watershed, Ontario Experimental Lakes Area, Ontario Dorset Environmental Science Centre, Ontario Buffalo Pound, Saskatchewan St Denis National Wildlife Area, Saskatchewan Tundra Ecosystem Research Station, Daring Lake, Northwest Territories Scotty Creek, Northwest Territories Trail Valley Creek, Inuvik, Northwest Territories Lake Hazen &amp; Skeleton Lake, Ellesmere Island, Nunavut</p>
<p>6. Please list any other expertise or recent experience (subjects, river basins, technology) not covered by above query that could help us in assessing your alignment with the GWF programme:</p>	<ul style="list-style-type: none"> <li>– drinking water and disinfection by-products</li> <li>– biogeochemical processes outside of the scope of "hydrological and terrestrial processes and watershed hydrology"</li> <li>– whole ecosystem experimentation</li> <li>– time-for-distance experimentation and data analysis</li> </ul>
